Portfolio: abdulganiy-ibrahim-dev.vercel.app

PROFESSIONAL SUMMARY

Full stack developer with hands on experience across React, Next.js, TypeScript, and Node.js/Express, with a growing focus on backend engineering and system design. Built and deployed a multi-tenant SaaS platform with database level authorization (Row Level Security) ensuring strict data isolation between tenants, alongside a separate Express/PostgreSQL project covering full CRUD architecture. Comfortable owning a feature from database schema through to UI, with particular interest in how data is structured, secured, and scaled. Seeking a full stack or backend leaning role where I can keep developing that depth.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React, Next.js, Tailwind CSS

Backend: Node.js, Express.js, REST APIs

Database & Auth: PostgreSQL, Supabase, Row Level Security (RLS), Authentication and Authorization

Tools: Git, GitHub, Postman, Vercel

PROJECTS

Sellora: Multi-Tenant Business Storefront SaaS

Full-stack SaaS platform allowing businesses to create their own storefront, manage products, orders, and track sales through a dashboard.

Key Contributions

- Designed multi-tenant data architecture from the ground up: every store is linked to its owner via userId, and all dependent data (products, orders, settings, sales) is scoped to that store's storeId.
- Enforced tenant isolation at the database level using Row Level Security policies on every table, so data separation doesn't depend on application code being correct every time.
- Implemented authentication and session handling using Supabase Auth.
- Built the storefront, dashboard, and order management interfaces end to end using Next.js, TypeScript, and Tailwind CSS.
- Structured API routes and data flow between Frontend and Supabase to support scalable features growth

Technologies: Next.js, TypeScript, Tailwind CSS, Supabase, PostgreSQL

Product Management System: CRUD Application

Full stack inventory management app supporting create, read, update, and delete operations on products.

Key Contributions:

- Built a custom Express.js backend from scratch, structuring routes, controllers, Services, and database logic separately rather than as a single file.
- Connected the backend to a PostgreSQL database and a React frontend.
- First project focused entirely on backend fundamentals, established the CRUD and code organization patterns used in later projects.

Technologies: React, TypeScript, Express.js, PostgreSQL

EDUCATION

Federal University of Technology, Minna (FUTMINNA)
B.Tech. *Information Technology* | **Expected Graduation:** 2029

CORE COMPETENCIES

- Full Stack Development (React, Next.js, TypeScript, Express.js)
- Multi-Tenant Architecture & Data Isolation
- Row Level Security (RLS) & Authorization
- Database Design (PostgreSQL, Supabase)
- REST API Development & Integration
- TypeScript & JavaScript (ES6+)
- Git Version Control
- Debugging & Problem Solving

ADDITIONAL INFORMATION

- Built and deployed Sellora, a production SaaS platform with multi-tenant authorization enforced at the database level.
- Actively deepening backend and system design skills through Node.js/Express.js projects.
- Comfortable working across the full stack, from schema design to interface.
